***The \$25K OFFERING.***

*An offering of \$25,000 to any astronaut or entity that can prove that **Dark matter** does exist.*

*The following is what is needed to conduct the Experiment:*

*One way to confirm the truth about Dark Matter is that any astronaut or any independent unmanned ship would take a trip as far out into outer space where it is known that dark matter exists. He or she must fill a clear hermetically sealed container with Dark Matter and bring it back to Earth, where it could be studied visually. As I previously stated, we will find that what exists inside the clear sealed container will not be dark but will exist as a clear nothingness. Now, if science really wants to know the truth, the same way the scientists have built underground chambers to see if neutrinos exist, then here is a chance to prove that dark matter does not exist and if dark matter is found, then I will pay the \$25,000 for being wrong. The amount will be deposited into an escrow account, if necessary.*

*And I can share with you what I found that relates to **DARK MATTER**, and **NEGATIVE** energy in my section called **MATTER***

**\*\*\*\*\***

## ***Our first encounter with bad food***

*Our health starts with our parents. If they ate excess sugars, salts, and fats, they will later pass on their bad health to us in our genes. When we are born, most of us are fed the healthiest food possible directly from our mother's breast; however, after a few months of life, we are fed cooked foods, which may or may not be healthy. Then, upon reaching our first year on earth, most of us have our first birthday celebration, and this is also the day that we are first introduced to the mechanical time system, and unhealthy things to eat in the name of feasting or celebrating, to which we also give the name "partying."*

*Many of us will remember our first birth day party, where our parents presented us with a cake, soda, ice-cream, and candy, all foods high in sugar and other unwanted enemies such as salts and fats. Sadly it is hard to take these food enemies away without our children seeing their parents negatively. Halloween arrives, and in the name of "feasting," kids are put on the road to becoming diabetics because of the high concentration of sugar, and the fat that clogs up your arteries and raises your blood pressure just a little more. I know some parents will say, "what else could we have given them as kids!"*

*Fortunately, there are many things we can still do to keep our children healthy, such as by feeding them homemade banana popsicles, which are easy to make: take very ripe bananas, add a little honey, mix it together and pour the mixture into plastic cups and freeze them. It is a very easy and healthy way to start feeding your young, loved ones. In addition to mixing bananas with honey, you can also add wheat germ, granola, and chopped nuts to create a healthy candy bar that is good for them, and for us. For more on recipes visit my section on health in Omnipresent I.*

*As adults, we also need to change our minds about "partying," feasting, or celebrating, and I say "our minds," because at a certain age we are conscious of what we are doing. Before we are one year old, the fault is with our parents, but when we grow up, parties or feasts, or what we call celebrations, in most cases include soda or alcohol. Alcohol is bad for the liver, and it contains sugar, so when mixed with a sugary soda too, it will also*

---

*put you on the road to becoming a diabetic, and if you smoke, no matter what kind of smoke you inhale, it will affect your lungs.*

*Additionally, many people eat on the road, because their lifestyle, and most fast food places serve burgers or ribs, and these foods unfortunately open the door to high blood pressure, and eventually a stroke, and furthermore, cancer. You can read more about this subject at my webpage [www.thenewbigbang.net](http://www.thenewbigbang.net), but you should remember that heartburn, which is due to a high intake of proteins from fatty foods, will open the door to an ulcer that can become cancerous.*

*Nowadays the pharmaceutical companies will tell you to take Tums or Prevacid, so they can make money from your bad eating habits, if you stay on this road of deadly eating. The health systems that now exists will cost you an additional “arm and a leg” making a guaranteed income for doctors and hospitals that benefit from your bad eating habits.*

*Therefore, keep an eye open. I went through this, and like many others I had to pay the price for the damage done by eating unhealthy foods, I asked myself how and when I began to get high blood pressure, and cancer, and when I nearly became a diabetic, I saw that WE ARE WHAT WE EAT! I am so lucky to have been able to redirect my life, to continue existing in this existing moment called the omnipresent moment in a healthier way.*

*Our life depends on our health long before we are born, for it starts with the bad eating habits of our farther and mother when they were unaware of the time we now know as the year 2013, which is understandable. However, we are born with all the salt that our body needs via vegetables and the sugar that we need was also given to us in fruits. Of great importance is that the amount of food that our body needs for survival is in proportion with what is found in fruits. This is that the amount of sugar that our kids need in that ratio of sweetness. In the agrarian stage, it was natural to store leftover foods like fruits by boiling and canning them in glass jars for future use or used in making pies. But when we consume more than that natural quota of sugar and salt and when we see the world of fast food as the way to exist, we get into trouble and start on the road to diabetes. So I hope that what I am sharing can help you find a better way of eating.*

**\*\*\*\* We are what we eat. \*\*\*\***

\*\*\*\*\*

### **The 3 stages of who am I**

#### **Who am I as stage # 1 as the road we are born on?**

*Let me share with you some of the things that have been found that are related to this subject of who I am as the human that started out as that speck of life that was permitted to exist at a particular moment in Earth's rotation. Once I was here I would be the only one that would be traveling a particular road, only at a particular moment. Others have traveled on this same road, but at a different moment. Others will also travel it, and use the same seat in the same school, etc. What makes me unique is that I am the only one traveling that road as my moment. I am the only one adjusting and reshaping to my surrounding as this particular moment.*

*Since two things cannot be in the same place at the same moment, I am that moment that was permitted to come into life as a human. I say permitted because life is a gift that comes only as a result of this pure energy's existence. IT has allowed life to exist as a result of ITS reshaping, which permitted me to be here as a thought; because as humans, we too are omnipresent.*

*This would mean that you and I are 100% of that pure energy or what we call the Creator in which we live as an omnipresent thought. You can say that you are everything that exists and everything that exists is you.*

*But let us get back to that which we think we are. We can then say that you are all those roads that only you traveled on at exactly that particular moment in Earth's rotation.*

*Here is an interesting thought related to IT and life. You are here because you exist as life. Your life is housed within a body that started at conception, developed into a baby, and kept reshaping into maturity. But the life force that exists as you does not change throughout your life. It is constant, it does not reshape during your life. I find it strange in*

*that life is the only thing that does not change. I have to take back having said that the only thing that does not change is change itself. I should have said that change is the duality to life that is constant as IT.*

*Your inner self makes you different from others. You were the only person born in that particular moment in that particular place on this planet. You were the only one permitted to travel on those particular roads, attend those particular schools, and meet those particular friends. Sure, there were others on those roads, in those classrooms, befriending the same friends, but not in the same moment or way that you did. Your decisions and perceptions came from your inner self.*

***Who are we? To the mind we are Tom, Dick, and Harry. To the spirit we are IT***

*Instead, we attach ourselves to our work, our household, our material belongings, and even our children. We actually believe that our children belong to us. Even as adults, we believe we belong to our parents! A day will come, possibly not until we are dying, when we realize that we cannot take any of our possessions with us, for nothing ever belonged to us.*

### ***One more possibility***

*If IT reshaped into everything that exists on this planet as ITS heated weight, there could be the possibility that IT used ITS weight on some other part of ITSELF (the Universe) as ITS weight to reshape ITSELF with mobility, as life. I do not doubt the possibility that I could have inter-planetary cousins as the result of ITS reshaping ITS heated weight. IT very well could use ITS weight within ITS nothingness to form extra-terrestrial bodies, especially when here on Earth IT used ITS weight and nothingness to produce very pretty humans in all colors and sizes, having minds that can know everything exists as ITS weight within a huge, cold nothingness (the Universe), which we now understand as the omnipresent IT. Future astronauts will see and share more information related to the things that IT exists as other parts of ITS heated weight and nothingness; and I hope that as these future astronauts come in contact with these other parts of IT, they remember the meaning of omnipresent, for to do so is to understand IT as God, or that which exists as pure energy. When we, with our human minds, can accept what this word implies, we, as minds, can accept ITS total*

omnipresence, and we, as minds, will then be able to answer the questions: Who am I? and Why am I here? To which my mind for now answers "Thank you IT, for permitting me to be here as fragments of your heated weight surrounded by your divine, conscious nothingness." You might better understand IT if you recall we are not who we think we are; we are IT as IT evolves.

## **Stage 2**

### **Who are we scientifically?**

Here is one more way to understand who are we scientifically, let me take you first to what the scientific community reached as its finding, the scientific community got to where they found that, if you and I are made of matter, and that every type of atom that you have, are of the same type, as an example there is no difference in the atoms that we humans have, take for example your body has the same calcium atoms that you have are the same type of calcium atoms that everyone else has, and this also applies to every type of atoms as the elements that our bodies have, then what is it scientifically that makes you different from the rest of us, and this is as far as the scientific community got to as human understanding as matter and as the atoms that make our existence possible, So in short to the scientific community way of thinking, was that if you and I are made from the same material (atoms) Then what is it that makes you different from me, which I will explain shortly what does make each one of us different, but for now let me end what I started with, which is that since the scientific community way of thinking was as atoms, they just needed to take one more step further, which is that they had to stop seeing things as atoms and go inside the atom itself which is what will show us what makes you and I different.

### **Who are we as the 3rd stage?**

### **WHAT IS IT THAT MAKES US DIFFERENT?**

What makes you different from everyone else? Let's start with you. In order for you to exist, you have to be made of matter and all matter comes from atoms. All atoms in order to exist have to have protons and neutrons and everything else that exists inside the atom. This is the way most of the scientific community would explain it. However, now all they need to do is to take it one step further. They have to stop seeing things as atoms and go inside the atom itself. This will show us what makes you and I different.

---

*We have to remember that these atoms exist only because of what exists as Pure Energy.*

*And this pure energy exist as heat, and this heat that existed as a **singularity decided to fragment itself to search for all existing possibilities that it could exist as its heated weight**, which it did. This is what is known as the Big Bang. First of all, this heated weight that existed as a singularity became matter and is known as hydrogen atom and then as helium and all the other elements that follow. This is what now exists as the elements that make our existence possible.*

*In order to understand what makes you different from me other than the first 2 stages, is the following example: The calcium atoms that I have are exactly of the same type on the outside, just like all the other atoms. However, **what makes my atoms different from yours is that the fragments of the heated weight that exist inside my atoms as matter are not the same as the fragments of heated weight that exist inside your body as atoms**. And now in 2018, it's possible to understand because this information did not exist prior to 2018.*

*Since we are on the subject, let's take one more step which has never been touched or written about before. Now you know that you are different from everyone else because of the different fragments of heated weight that are inside your atoms which came from this Pure Energy when it existed as a singularity. Here is more information that relates to what exists as Pure Energy. When this Pure Energy existed as a singularity, nothing existed as matter because this Pure Energy had not yet become what now exists as the Universe. My understanding is that when this Pure Energy existed as a singularity, nothing was happening, and to me, whoever is there as this Pure Energy has intelligence and I say this because we are totally made from these fragments that came from this stuff called Pure Energy. I have no problem giving credit where credit is due. And you can read more about it in my section called, **Who Made Us**.*

*So as I see it, whoever is there as this heated weight decided to fragment all of its heated weight in search of all the existing possibilities that its heated weight could transform, transmute or as I say reshape into. And I have to be grateful **IT** did, otherwise you and I would not be here at this moment in **ITS** existence.*

All the above information is good to know, but there is still something else you need to know, which was not known before until I was allowed to exist as the fragments of heated weight that I exist as. Therefore, now that we know what makes everything that exists as being different, there is something that unites us all and everything else that exists which is the way **IT** also exists as. However, not as the heated weight that exists as Pure Energy because Pure Energy only exists as 1%.

The other way that whoever **IT** is exists is what is known scientifically as negative energy. The reason why scientists call it negative energy is as I have said elsewhere, our human mind can only understand something if it exists as something. And if something does exist, it has to have a fragment of the heated weight that existed from the heated weight that came from the moment of the Big Bang. When they found that something did exist out there as what they found as the empty space that exists as the empty universe, they didn't know what to name it so they called it negative energy. Since the heated weight was labeled to be the positive, as what exists as protons and neutrons, they also gave it the name with the word energy because they felt that this negative something had to have come from the Big Bang which is not true.

You, the reader, can see for yourself by seeing the visual called **The New Big Bang Without the Bang** that the empty space that now exists called negative energy that exists as 99%, is the same empty space that exists as what is inside every atom, as 99% empty space because they are both the same empty space. However, we need to remember that this empty space does exist. In short, every empty space that exists inside every atom is the same empty space that all other atoms have as their empty space and this empty space inside the Universe is the same empty space, which is called negative energy and dark matter. This can be easy to understand when we remember that all the heated weight comes from the same source that existed as a singularity and this heated weight can only exist inside of what exists as this emptiness. You can read more about this in my other writings.

Another way to look at this is that everything that exists has to have a relation to the heated weight that exists as a singularity which existed at the moment of the Big Bang. Everything that is related to this heated weight can only exist inside of what exists as this empty space. Imagine that you are looking at the universe from as far away as you can, what you will notice is that everything that exists is inside this place called the empty universe, and everything that exists that is made of matter is made of atoms and

*all of these atoms have their interior as 99% empty space. This empty space is inside of the 99% empty space that exists outside as the Universe.*

*The scientific community can understand what I am saying when they remember that everything that exists starting from the matter can only exist inside of this empty nothingness as the empty universe. Every atom that exists can only exist inside of this nothingness that exists as negative energy and every atom that exists has this empty nothingness inside as what exists as matter. What no one yet has seen is that the empty nothingness inside every atom is the same nothingness that exists outside.*

*I will end this section by saying that there is someone there and this could be understood by just remembering that there already is something which is called Pure Energy. If this Pure Energy were not there, then you and I and everything that now exists would not be here. Everything came from fragments of that Pure Energy. However, what was overlooked before was that for matter to exist, it had to exist with the empty nothingness that exists inside every atom. And for atoms to exist they, too, had to exist inside of whomever **IT** is that exists as this empty nothingness that exists as the empty universe labeled negative energy.*

*As I have stated many times before, the only word that I found that exists for something that exists as a nothingness is the word spirit, which means something that exists but does not exist as something. The great thing is that whoever **IT** is left a door that we can connect to **IT**. Those of you that are interested in knowing more can read the section called Meditation. Up until now all we can do is personally connect with this nothingness in meditation and in doing so, something will happen only for you. And I need to remind the readers that I do not have a scientific background.*

### **Who are we as extras to stage 3 as an ARTERY?**

*Let me start explaining why this section on the subject as to who are we, a subject that no one yet has fully detailed, and there have been two (2) attempts before me made to explain "who are we".*

*And the third attempt was made by me, which was based on what I saw as the definition given by science.*

*Let me explain this in the simplest way possible, it was because in seeing what the scientific minds saw was when I became aware that what was needed was to remind the scientific community that for us to better understand who we are, we needed to remember what we were looking for in an answer that was coming from what existed as an artery. Now let me try and explain this.*

*So let us start with you, in order for you to exist you have to be made of matter, and all matter comes from atoms, and all atoms in order to exist have to have protons, and neutrons, and everything else that exist inside the atom, now this is the way most of the scientific community, would explain it.*

## **WHY AN ARTERY**

*Why do I say it is an artery, or better still arteries? Let's start with where did this artery begin its formation? To explain this we have to go back to where everything got started, which is what is known as the big bang, which is when there existed a dense singular heated weight, and it was from this one singular heated weight that exploded into quantifiable fragments to become hydrogen atoms. Now I need that you, the reader, to remember that fragments that came from this one singular heated weight are now individual fragments, and that each fragmented heated weight is not the same as the other heated weight that exist in other atoms; that they all came from the same place, yes, but they now exist as different portions which is what makes every atom an individual in itself. And they will now become arteries; one of them is called chemistry, which is where there exist 96 different types of atoms, and science has classified them with different numbers that relate to each one. Number one is called hydrogen, which has one proton, and what this means is that every hydrogen atom has the same as heated weight as the other hydrogen atoms and science then says that atom #2 is helium. That helium has more protons in it, and that every one that follows will have more protons in it. But I need that you, the reader, try and remember that all atoms have this fragmented heated weight inside, which is the heated weight that came from the one heated weight that existed as a singularity, that belongs to that which exist as pure energy. Yet I find that when most people who talk about what is inside the atom, they refer to the protons or neutrons and all the other Particles inside, and here is where I feel the scientific community lost track of what they knew existed as the heated weight that existed as a singularity, but more important they the scientific community forgot that atoms are what, or better still who is IT, that exists as this pure energy, and what it is doing with one of ITS components, that exist as ITS heated weight .*

Now I use this area called chemistry as an artery because everything that exists is based on chemistry, as an example, biology, and I use biology because we exist as the chemical body that we have that refers to who we are.

Now I again have to take you back to where all arteries got their start from, which was the heated weight that got fragmented into atoms to become matter.

**Now some cosmologists, such as Neil deGrasse Tyson, say that we came from stardust. This is true, but he also doesn't remember that what they are studying as cosmology is just an artery. He, too, just had to take one more step further and remember that the stardust that we are made from came from the heated weight that existed as a singularity.**

It is of importance to use science because as science it either is or is not. By this I mean that it is not a philosophy, or a concept, or theory, for what I am writing you is what is, to which I have to add that I could not write what I am writing you if it was not the advancements in science that exist at this moment in human understanding, for what I am writing could not have been written let's say, in 1950.

So let's go back to what science refers to when they speak about who we are as atoms; when they say that all the atoms that you and I have are of the same type, which is OK to think this way but to do so means that we have forgotten where these atoms came from as their origin and most important is that what makes you different from me is that your portions of your heated weight are not the same portions that I have as **ITS** heated weight, but everything that exists like you and me all or linked by the same 99.99 % of this infinite nothingness that exists that belongs to that which exist as that which is known as pure energy, as ITS shell body known as the existing universe, and is what gives meaning to the word omnipresent.

\*\*\*\*\*

## **THE ATOMIC CLOCK**

Before you begin to read this section that relates to **TIME**, the first thing to remember is that when anyone uses the word "time" you have to remember that the word "time" and its meaning exists as this:

***Time is only a human invention that serves only as a human convenience so that two or more people can find themselves at a particular earth rotation. However, our time system is not universal, and our mechanical time system cannot be used outside of our galaxy. For example: If a spaceship from earth is traveling outside our galaxy and it encounters a ship that is not from our galaxy, and they are trying to tell each other how long it will take for them to reach each other. Would the earth ship say that they can reach each other in a few hours, days, weeks months, or even years?***

*The first thing that the earth ship has to remember is that our time system is based on the time the earth makes one rotation, which is what we call one day or every time the earth makes one rotation around the moon, we call a month and one year only means how long our planet takes to go around our solar sun.*

*But as earthlings, we have to remember that anyone that does not exist within our galaxy will have a way of understanding their existence differently. Then again, these aliens may be aware that they, like us, only exist as one moment within their existence. If these aliens have a solar sun that is farther away from their planet than ours, to them one year is longer than ours, but their living existence will be the same as ours because if both of them were in the same room, they would be living as the same existing moment even if they both have different time systems.*

*Anyway, I hope you will find what follows as the subject called **TIME**, interesting. And for all of the minds that feel that time does exist, you should remember that the search to corner this thing called time, reached its maximum when the Atomic clock was built so as to measure the accuracy of what time is. They found that when the Atomic clock was taken as far away from the earth's gravitational pull, it ran faster, and what this means is that time is still a human invention and it is not a constant and time is different for different people at different places on this planet.*

*As I have said elsewhere, the majority of us humans are introduced into this mechanical time system when we are one year old and we are governed by this mechanical time system until we die. However, this mechanical time system is not universal and cannot be used outside of our galaxy.*

*For a more detail of what is Time read section called **TIME** at. [www.thenewbigbang.net](http://www.thenewbigbang.net)*

\*\*\*\*\*

### **Adolph Hitler**

*Did you know that Adolph Hitler did more for the liberation of the American women than any other single person did? It's true. Consider this: All able-bodied men from the USA went to war while the women remained at home to run the industries that were previously run by males. When many of the men did not return, women continued to staff those jobs. What's more, women began pursuing other careers previously dominated by men.*

### **Hitler and the black man**

*Hitler, also unknowingly, gave the black American male a push in the direction of getting more equality at home. Having been recruited to fight in WW II, black men fought equally next to the white men when they returned home the struggle for equality continued.*

~~~~~  
**\*\*Adolph Hitler impersonated Charlie Chaplin's moustache.\*\***  
~~~~~

### **Contamination**

*Many countries begin every year with an unspoken agreement to take part in the contamination of this planet. The smoke in the wake of the New Year's Eve fireworks is so thick that we lose our sense of the fresh night air. This smoke remains in our*

*atmosphere far longer than it remains in our streets—it will endure throughout our lives as well as the lives of our children. However, the human race began contaminating the planet long before fireworks existed.*

*Our personal contribution to contamination begins about six months before we are born when our parents prepare for our arrival by buying cribs, bibs, blankets, bottles, toys, and all else that we may need as an infant. These so needed baby accessories come at the expense of land and water. In their production, they leave behind scraps and excess dyes, factory waste that must be disposed of someplace — some area of land or water.*

*Even when we clean, we contaminate. The chemical compounds in soaps and detergents, waxes and deodorizers, all that we use to wash our bodies, kitchens, cars, and all the material belongings we desire to keep looking new adds to the contamination of our planet. Think about all our material belongings! Our need for them leads to cutting down trees, turning islands into landfills, polluting our waters, and poisoning animals and even humans!*

*We contaminate for our want of televisions, radios, cell phones, furniture, and clothing. Think of the jewelry we wear on our necks to show our belief in a god or of all the religious ornaments that we hang on holidays. Multiply your belongings alone by several billion. What happens to these billions and billions of things when we are finished using them?*

*Is it possible for us to think positively about this contamination? Might we even be grateful for it?*

*Let's look at cars. The production of cars produces toxic waste and garbage in general, and the production of our one car's waste doesn't end after its purchase.*

*As it ages, its muffler and exhaust will also age and leak polluting fumes, so what do we do to stop it? We replace the old exhaust pipes with new ones that were manufactured in a factory and contaminated some area. Not only that, but the old parts have now become trash. So, by replacing the muffler to stop the contamination of the air in one place, we perpetuate the contamination of another area. Yet our cars are great conveniences; they get us where we want to go.*

**\*\* Music cannot exist without the silence (the nothingness) that exist in-between the notes \*\*\***

**\*\*\*\*\***
